OVERVIEW
Thank you for selecting the AWH54/AWH55 Wireless Office Headset System from Avaya. You have made the right choice for comfort and versatility.

This system allows your telephone to use a cordless Avaya headset through an adapting base. It offers hands-free convenience and long-range workspace mobility.

With the use of a hook switch control cord (included with AWH55 only) or an optional handset lifter, the user can remotely receive the telephone’s ring alert and can answer the call by simply pushing the talk button on the headset.

IMPORTANCE SAFETY INFORMATION

GENERAL
⚠️ When using your telephone equipment these basic safety precautions and warnings should be followed to reduce the risk of fire, electric shock, and injury to persons.

• Read and follow all instructions and warnings and instructions prior to using the product. The symbol ⚠️ identifies and alerts the user to the presence of important operating, safety, and service instructions.
• This product contains gold-plated nickel, phosphor bronze and copper. If you experience a skin irritation, discontinue use and contact Avaya.
• This product is intended to be powered by a Listed Class 2 Direct Plug-In Power Unit rated 9VDC at 800mA, Part No. 64401-02, rated at an input voltage of 120 VAC, 60Hz and an output voltage of 9 VDC at 800mA.
• This product requires AC power in order to operate. During a power outage, have another telephone available that is powered only by the telephone line.

WARNING
⚠️ Do not locate this product near water, for example, near a bathtub, or sink, in a wet basement, or near a swimming pool.
• This product should never be placed near or over a radiator or heat register. It should not be placed in a built-in installation unless proper ventilation is provided.
• Do not allow anything to rest on the power cord. Do not locate this product where persons walking on it will damage the cord.
• Do not overload outlets and extension cords as this can result in risk of fire or electric shock.
• Never disassemble or push objects of any kind into the product since this may short out parts which could result in a fire or electric shock. Never spill liquid of any kind on the product.
• Use caution when installing or modifying telephone lines.
• Avoid using telephone equipment during an electrical storm.
• Keep all product cords and cables away from operating machinery.
• Do not use this equipment to report a gas leak while you are in the vicinity of a gas leak.
• Never allow children to play with the headset/adapter–small parts may be a choking hazard.
• Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

BATTERY SAFETY
⚠️ To reduce the risk of fire or injury to persons, read and follow these instructions.
• Use only the battery pack supplied with this product, part number 64399-02.
• Do not dispose of battery pack in a fire. The cells may explode. Check with local codes for disposal instructions.
• Do not open or mutilate battery pack. Released electrolyte is corrosive and may cause damage to eyes or skin and may be toxic if swallowed.
• Exercise care in handling the battery pack in order not to short the battery contacts with conducting materials such as rings, bracelets, and keys. The battery or conductor may overheat and cause burns.
• Charge the battery pack in accordance with instructions supplied with this unit.
• Observe proper orientation between battery pack and charger contacts.
• Batteries can be swallowed by children and are dangerous if swallowed. Always store and dispose of batteries where children can’t reach them.

AWH55 SETUP 1
with AVAYA 2420, 4610SW, 4620, 4620SW, 4621SW, 4622SW, 4625SW, 4630SW 5420, 5610 and 5620 Telephones

AWH55 SETUP 2
with AVAYA 2410, 5410, 6416 D+M and 6424 D+M Telephones

configuration dial set to 3

configuration dial set to 1

{see pages 4 and 5 for callout of components}
AWH54/AWH55 SETUP 3
with other AVAYA Telephones

⚠️ Caution: It is important for correct and safe operation that the base cord is installed into the proper jack of your telephone. Follow these instructions carefully, especially if your telephone has two jacks where the handset was attached. Be sure to note or mark which jack was used for the handset.

CHARGE YOUR HEADSET

Dock the headset into the charge cradle (1). The amber charge indicator (9) will flash during charge.

If charge indicator does not go on, reposition headset in the cradle.

The charge indicator will go steady after headset is fully charged and ready for use (approximately 3 hours).

POSITIONING

Be sure to connect this plug into the jack where the handset was connected.
MAKE A TEST CALL

To place a test call press the talk button on the headset. **Important:** If your telephone has a receive volume control ensure it is set no higher than mid-range—too high a setting could cause audio problems.

COMPATIBILITY WITH YOUR TELEPHONE

It is very important that the configuration dial (4) is positioned correctly. Audio problems may be experienced if this is incorrectly set. If you cannot hear a dial tone through your headset, turn the configuration dial until you obtain it. Then dial a co-worker and while speaking, turn the configuration dial through the 4 positions. Select the position that provides the best sound quality for both you and your co-worker. During this call you should also adjust the Listen and Speak Volume and Listen Tone as described next. Once set, the configuration dial will not require any further adjustment.

Continue configuration setup by making a test call to a friend or associate using the key pad on your telephone.

Adjust your telephone configuration dial on the base to position 3 for the following telephones: 2420, 4610SW, 4620, 4620SW, 4621SW, 4622SW, 4625SW, 4630SW, 5420, 5610 and 5620. Adjust the configuration dial to position 1 for the following telephones: 2410, 5410, 6416 D+M and 6424 D+M. For other telephones, adjust the configuration dial to any position where you hear a tone.
If they cannot hear you at all, try changing your telephone configuration dial on the base to another one of its 4 positions until you hear them and they hear you. Volume adjustments can be made separately as described in the next step.

**LISTEN VOLUME**

**A:** Adjust the Listen Volume (how others sound to you) to a comfortable level.  
**B:** If you cannot find a comfortable Listen level, try different settings on the Listen Volume Master Switch until a satisfactory sound level is experienced.  
**Important:** Listen Volume set too high can cause audio quality problems. Please refer to the Troubleshooting section of this guide for more information.

**SPEAK VOLUME**

**A:** Adjust the Speak Volume (how you sound to others) until the level is comfortable for your co-worker.  
**B:** If you cannot find a comfortable Speak level, try different settings on the Speak Volume Master Switch (A-D) until a satisfactory sound level is experienced.  
**Important:** Speak Volume set too high can cause audio quality problems. Please refer to the Troubleshooting section of this guide for more information.  

To mute a call, press the mute button once (three beeps will sound). To take the call off mute, press the button again.
ENABLE/DISABLE INTELLISTAND™

When the AWH54/AWH55 Wireless Headset System is used in conjunction with a Hookswitch Control Cord or an AVAYA Telephone Handset Lifter, you can enable the IntelliStand feature.

The IntelliStand senses when the headset has been removed or placed in the AWH54/AWH55 base unit, automatically activating the lifter and enabling headset/handset mode to answer or end a call.

The IntelliStand feature is disabled (off) when the IntelliStand switch is in position I (up), or enabled (on) when the switch is in position II (down).

USE THE HEADSET/HANDSET MODE

Pressing the talk button (14) on the headset selects headset mode. The talk indicator (2) on the base unit will illuminate steady green and the talk indicator light on the headset will also flash when in headset mode. Both of the indicators are off when in handset mode.

TIP: By selecting handset mode after completing your call, you will conserve the headset battery power and extend the remaining available talk time. You can achieve this by pressing the talk button immediately on conclusion of the call.

PLACE A CALL USING YOUR HEADSET

To place a call using the headset, the system must be in headset mode and dial in the normal way. You will then be able to talk through your headset. When the call is complete, return the AWH54/AWH55 to the handset mode.

RECEIVE A CALL USING YOUR HEADSET

When your telephone rings, take your AWH54/AWH55 Wireless Headset System to the headset mode. You will then be able to talk through your headset. When the call is complete, return the system to the handset mode.

PLACE AND RECEIVE A CALL USING HANDSET

In handset mode the telephone can be used to make and receive calls in the normal way. Ensure that your AWH54/AWH55 Wireless Headset System is in handset mode.
Recharge the Headset
To recharge the headset, place it into the charge cradle in the base unit. During charging, the charge indicator on the base unit will flash amber.

When the headset is fully charged, the charge indicator on the base unit will stop flashing and remain illuminated.

A completely depleted headset requires a minimum charge time of 1 hour before use, and 3 hours to fully charge.

Replace the Headset Battery
Should it be necessary to replace the headset battery at anytime please refer to the diagrams below.

The headset and base unit are supplied subscribed to each other. However, if you wish to use a replacement headset with the base unit, then the units must be re-subscribed as follows:

1. Return the headset to the headset charge cradle.

2. Press and hold both the talk volume fine tune buttons on the base unit for a minimum of 5 seconds. The power indicator (3) will then flash (red).

3. Press and hold the headset mute control button for a minimum of 5 seconds. The talk indicator light (17) on the headset will then illuminate (green).

Successful re-subscription is indicated when the power indicator is fully illuminated and the talk indicator light is off.

4. To complete the process, reset the base unit by disconnecting the AC power adapter (24) from the AC power adapter jack (7) for 5 seconds, then reconnect.

5. If re-subscription fails within 2 minutes the headset will return to the un-subscribed state. Try the re-subscription process again or call Technical Support (page 27).
SYSTEM RESET

To recover from some fault conditions (refer to the Troubleshooting Section) you may need to perform a system reset.

To perform the system reset follow this procedure:

1. Press both the talk button (14) and the mute control (15) button on the headset for 5 seconds.
2. When the talk indicator light (17) on the headset blinks, release both buttons.
3. Press the talk button again.
4. Next reset the base unit by disconnecting the AC power adapter (24) from the AC power adapter jack (7) for 5 seconds, then reconnect.

The system reset operation is complete.

MAINTENANCE

1. Unplug the unit from the telephone and the AC adapter from the power source before cleaning.
2. Clean the equipment with a damp (not wet) cloth.
3. Do not use solvents or other cleaning agents.

FCC REQUIMENTS

FCC Requirements—Part 15
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception which can be determined by turning the radio or television off and on, the user is encouraged to try to correct interference by one or more of the following measures:
1. Reorient or relocate the receiving antenna.
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on another circuit.
4. Consult the dealer or an experienced radio/TV technician for help.

RF Exposure Information
This device and its antenna must not be co-located or operated in conjunction with any other antenna or transmitter. To comply with FCC RF exposure requirements, only use supplied antenna. Any unauthorized modification to the antenna or device could void the user's authority to operate this device.

FCC Requirements—Part 68
This equipment complies with Part 68 of the FCC rules and the requirements adopted by ACTA. On the exterior of this equipment is a label that contains a product identifier in the format US:AAAEQ##TXXXX. If requested, this information must be provided to your telephone company.

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by ACTA. A compliant telephone cord and modular plug is provided with this product. It is designed to be connected to a compatible jack that is also compliant. See installation instructions for details.

The REN is useful to determine the quantity of devices you may connect to your telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most, but not all areas, the sum of the RENs should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, contact your local telephone company. For product approved after July 23, 2001, the REN for this product is part of the product identifier that has the format
Accessing the Avaya Unified Communication Center (UCC) from the AWH54/AWH55

1. Connect the AWH54/AWH55 to the Avaya telephone. Follow the instructions in this user’s guide.

2. Ask your switch administrator to configure your telephone for ringdown to the UCC in your telephone first call appearance.*

* Notes for switch administrators on configuring ringdown for your AVAYA telephones:
- Some phones allow for direct ringdown configuration, i.e.: 2500
- Other phones do not allow for direct ringdown configurations, i.e.: 64XX. In order to configure the ringdown in these phones the administrator needs to:
  - Create a phantom extension setup as a 2500 type (No real port has to be assigned).
  - Create a ring down to the UCC for the phantom extension.
  - Bridge the phantom extension to the telephone call appearance 1 (configure it as an “abrdg-appr” and setup the “Auto Select Any Idle Appearance” to Yes).

The Avaya Headset Support Line is ready to assist you! Dial (800) 544-4779 Monday through Friday, 5A.M. to 5 P.M. Pacific Time. For accessibility information also call the Avaya Headset Support Line.
