Vulnerability Summary

A vulnerability in Poly VVX, CCX and Trio models running UC software could allow an authenticated, remote attacker to obtain sensitive device configuration information. A successful exploit could allow the attacker to extract sensitive information from the affected device. The vulnerability is due to clear-text storage and weak permissions on the related file.

Solution

Poly has released firmware updates that address this vulnerability. There are no workarounds that address this vulnerability. Please refer to the release notes for more information to confirm the supported hardware and software configurations are used.
