Topics:

- Audience, Purpose, and Required Skills
- Related Poly and Partner Resources

This guide contains overview information, procedures, and references you can use to perform tasks with your video system.

The information in this guide applies to all the following Poly video systems except where noted:

- Poly G7500 (model: P011)
- Poly Studio X50 (model: P017)
- Poly Studio X30 (model: P018)
- Poly Studio E70 (model: P025)

Audience, Purpose, and Required Skills

This guide is intended for beginning users, as well as intermediate and advanced users, who want to learn more about the features available with the system.

Related Poly and Partner Resources

See the following sites for information related to this product.

- The Poly Online Support Center is the entry point to online product, service, and solution support information including Video Tutorials, Documents & Software, Knowledge Base, Community Discussions, Poly University, and additional services.
- The Poly Document Library provides support documentation for active products, services, and solutions. The documentation displays in responsive HTML5 format so that you can easily access and view installation, configuration, or administration content from any online device.
- The Poly Community provides access to the latest developer and support information. Create an account to access Poly support personnel and participate in developer and support forums. You can find the latest information on hardware, software, and partner solutions topics, share ideas, and solve problems with your colleagues.
- The Poly Partner Network is a program where resellers, distributors, solutions providers, and unified communications providers deliver high-value business solutions that meet critical customer needs, making it easy for you to communicate face-to-face using the applications and devices you use every day.
- The Poly Services help your business succeed and get the most out of your investment through the benefits of collaboration.

Poly Partner Mode Overview

Poly Partner Mode allows you to run third-party conferencing applications on supported Poly video systems. For example, after powering on your system for the first time, you can select Zoom Rooms to place Zoom calls.

Refer to the supported partner documentation for information on using third-party applications:

- Zoom Rooms: https://support.zoom.us/hc/en-us
- Microsoft Teams Rooms: https://support.office.com/en-us/teams
- GoToRoom by LogMeIn: https://support.goto.com/products
- StarLeaf: https://support.starleaf.com/
- RingCentral Rooms (RCV Rooms): https://support.ringcentral.com/
- Dialpad: https://help.dialpad.com/

Product Overview of Poly Video Systems

Poly G7500, Studio X50, and Studio X30 systems in Partner Mode can seamlessly join meetings using third-party conferencing applications.

Note: Exact features and capabilities can vary between partner applications. See the application’s documentation for information.

Poly G7500 System Features and Capabilities
G7500 systems support the following features:
Peripheral cameras and microphones make the system scalable for medium rooms and up to large integrated rooms
- Placing and joining video calls
- Sharing wireless and wired content
- Camera tracking technology that can automatically zoom in on the person talking or frame the group of people in the room (depending on the paired camera and system configuration)
- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments
- Polycom Acoustic Fence technology, which enables video conferencing in open workspaces by capturing only the voices in a defined area
- HDMI: Single input and dual output
- Using a wired or wireless USB mouse as an input device

Poly Studio X50 Features and Capabilities

Studio X50 systems support the following features:
- All-in-one collaboration system for huddle rooms and small-to-medium rooms
- No need for a separate PC, laptop, or codec to run video-conferencing software
- Placing and joining video calls
- Sharing wireless and wired content
- Built-in 4K camera with ultra-wide 120-degree field of view
- Camera tracking technology that automatically frames the group of people in the room
- Hi-fidelity, built-in stereo microphones that pick up sound within 7.62 m (25 ft) and use spatial audio for life-like presence and clarity
- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments
- Dual stereo speakers
- HDMI: Single input and dual output
- Using a wired or wireless USB mouse as an input device

Poly Studio X30 Features and Capabilities

Studio X30 systems support the following features:
- All-in-one collaboration system for huddle rooms and small-to-medium rooms
- No need for a separate PC, laptop, or codec to run video-conferencing software
- Placing and joining video calls
- Sharing wireless and wired content
- Built-in 4K camera with ultra-wide 120-degree field of view
- Camera tracking technology that automatically frames the group of people in the room
- High-fidelity, built-in stereo microphones that pick up sound within 4.57 m (15 ft) and use spatial audio for life-like presence and clarity
- Poly NoiseBlockAI, which eliminates background and extraneous sound during calls in common working environments
- Single mono speaker
• HDMI: Single input and output
• Using a wired or wireless USB mouse as an input device

Product Overview of Poly Studio E70 Camera

Poly Studio E70 is a dual-camera solution supported on Poly G7500 systems running Poly VideoOS 3.6 or later.

The Poly Studio E70 camera is a standalone USB 4K camera that includes microphones for audio pickup and full tracking and framing capabilities. The Studio E70 camera provides coverage up to 7.6 m (25 ft) for video and audio.

Speaker Framing and Group Framing on Studio E70

Speaker framing enables Studio E70 to determine which participant is actively speaking. The camera, then frames the speaker when transmitting video to the far end. Group framing enables the camera to automatically focus on one or more speakers to display all speakers to the far end.

Initially, one camera captures the current view while the other camera uses microphones to voice-track the next target. The camera frames the speaker before displaying the video so that call participants don’t see the pan, tilt, or zoom of the cameras. If two people speak alternately, one camera tracks the first speaker while the other camera tracks the second speaker.

Overview of System Hardware

The following figures and tables provide information about hardware features available on your system.

Poly G7500 Hardware

The following figure displays the hardware features on the Poly G7500 system. The table lists each feature numbered in the figure.

**Powering the System On and Off**

The system turns on when you plug it into a power source. The system doesn't have a power button, so you must unplug the power cable to power it off.

**Note:** Don't power off the system during maintenance activities (for example, while a software update is in progress).
Wake the System

After a period of no activity, the system enters sleep mode (if configured by your administrator). You can wake it using a touch monitor or Poly TC8.

Procedure

» Do one of the following:
  ▪ If you’re using a touch monitor, tap the primary screen.
  ▪ If you’re using the TC8, tap the screen.
  ▪ If you’re using a Poly Trio, tap the screen.

Accessibility Features

Poly products include a number of features to accommodate users with disabilities.

Users Who Are Deaf or Hard of Hearing

Your system includes accessibility features for users who are deaf or hard of hearing to use the system. The following table lists the accessibility features for users who are deaf or hard of hearing.

Accessibility Features for Users Who Are Deaf or Hard of Hearing

<table>
<thead>
<tr>
<th>Accessibility Feature</th>

Sharing Content

Topics:

- **Share Content Using an HDMI Connection**

To enhance the collaboration experience, you can share documents, graphics, and videos with other participants using a computer.

**Share Content Using an HDMI Connection**

Share content from your device through an HDMI connection. This method doesn’t require you to connect using a wireless service.

**Procedure**

- Connect your device to the video system’s HDMI input port.

**Related Links**

[Use Your System as a Computer Accessory](#) on page 17
Using Device Mode

Topics:

- Computer and Cable Requirements
- Access Device Mode
- Use Your System as a Computer Accessory
- Adjust the System Audio and Camera Settings
- Managing Incoming Calls When in Device Mode
- Exit Device Mode and Disconnect Your Computer

Poly Device Mode enables you to use the system’s camera, speaker, microphone, and connected monitors from your computer.

Once you connect the system to your computer with a USB cable, you can control the video system’s camera and audio features using your computer’s third-party conferencing application. For example, instead of using your computer’s camera for Microsoft Teams calls, connect the Studio X30 and use its 4K camera to automatically follow the conversation in the room. You also gain a Poly echo-cancelling microphone and speaker technology during calls.

Computer and Cable Requirements

Your computer and cables must meet the following requirements to use Poly Device Mode.

Operating system requirements:
- Windows 10 1803 or later
- macOS 10.12 or later

USB cable requirements:
- A cable with at least one USB-C connection for the video system
- USB 2.0 or USB 3.0 cable (preferred to ensure connection reliability and video and audio quality)
- Self-powered USB booster extension cable for connections longer than 2 m (6.6 ft)

Note: Don’t use a cable used for charging devices. A charging cable may not be capable of sending data.

HDMI cable requirements:
- HDMI adapter is required if your computer doesn’t have an HDMI port

Access Device Mode

Use the system touchscreen or a TC8 device to start Device Mode.
Note: Your administrator may configure your system to remain in Device Mode. If your system is already in Device Mode, the system monitor and TC8 device prompt you to connect a USB and HDMI cable to your computer.

Procedure

» Do one of the following:
  ▪ From the right border of your screen, swipe left. Select Device Mode.
  ▪ When using Zoom Rooms or Microsoft Teams, connect the USB-C cable to the video system and connect the other end of the USB cable to your computer to automatically enter Device Mode.

The Device Mode screen appears.

Related Links
Use Your System as a Computer Accessory on page 17

Use Your System as a Computer Accessory

To use the video system as an external camera and audio accessory, set your system to Poly Device Mode and connect your Windows or macOS computer with a USB cable.

If your system isn’t already in Device Mode, access Device Mode. If your conferencing application uses echo cancellation, disable that feature.

You must use a cable with at least one USB-C connection for your video system. If you use a cable with only one USB-C connection, the USB-C end must connect to your video system for Device Mode to work properly.

Note: Poly Device Mode isn’t available if your system administrator disables the system USB ports. If you need help with Device Mode or connecting a computer to your system, contact your administrator.

Procedure

1. Connect a USB-C end of the USB cable to the video system’s USB-C port, and connect the other end of the USB cable to your computer.

   The system monitor and the TC8 device display a confirmation message.

   If you’re using Zoom Rooms or Microsoft Teams, Device Mode automatically starts when you connect the USB cable to your computer. Once you disconnect the USB cable, the system automatically exits Device Mode in 20 to 30 seconds.

2. Optional: To display your computer on the video system monitor, connect your computer using the system’s HDMI input port.

Related Links
Access Device Mode on page 16
Share Content Using an HDMI Connection on page 15
Adjust the System Audio and Camera Settings

In Device Mode, you can mute the system, adjust the volume, and adjust camera settings. Access Device Mode and connect your computer to the system.

**Note:** The controls on a connected Poly Trio phone don’t work if the system is in Device Mode.

**Procedure**

1. To mute the microphones, do one of the following:
   - In a conference application on your computer, select mute.
   - On the TC8 or any connected microphone, select Mute.

2. To adjust the volume, do one of the following:
   - On the touchscreen or TC8, select Volume and adjust the volume slider.
   - Adjust the volume from your computer using the computer or conference application settings.

   **Note:** Ensure that you select the correct device when adjusting the volume. Changing the volume alone may not work. You must have selected Studio X50, Studio X30, or G7500 as the audio device.

3. To configure camera settings:
   a. From the right border of the TC8 or the touch screen, swipe left and select Camera Settings.
   b. Select Camera Control.
      - Turn Camera Tracking on or off.
      - Select or set a Preset.
      - Press + to zoom in or - to zoom out.
      - Press the arrows to tilt up and down or to pan left to right.

Managing Incoming Calls When in Device Mode

If there’s an incoming call, your video system may exit Poly Device Mode. This depends on the partner conferencing application you’re using for the video system.

Exit Device Mode and Disconnect Your Computer

Any camera options you change on the video system with your USB-connected computer revert to their previous settings when you exit Poly Device Mode.

**Note:** If Poly Device Mode is set as the provider, Exit X isn’t available.
Procedure

» Do one of the following:
  ▪ On the video system local interface or TC8 device (if you have one), select Exit.
  ▪ Unplug the cables connecting your computer and video system. After a short delay, you see the home screen (even if you haven’t selected Exit).
Settings

Topics:

- Cameras
- Audio Adjustments

Before or during calls, you can adjust the system volume. During calls, you can adjust your camera’s position.

Cameras

Depending on the camera type, you can control the following options:

- Adjust near-site (local) camera positions.
- Turn tracking on or off.

Adjust an In-Room Camera

To enhance the view of meeting participants, make adjustments to the in-room camera.

If camera tracking is on, camera control is unavailable. Turn tracking off to access camera controls.

You can only make camera adjustments during a call.

With the Studio X50 and Studio X30 systems, you can’t pan or tilt the camera if it’s zoomed all the way out.

Procedure

1. From the right border of your screen, swipe left.
2. Go to Camera Settings > Camera Controls.
3. Press + to zoom in or - to zoom out. Press the arrows to tilt up and down or to pan left to right.
4. To exit the control screen, select Back ← .

Turn Camera Tracking On or Off

When camera tracking is on, the camera automatically frames the group of people in the room or the current speaker (depending on your camera and how your system is configured).

Procedure

1. From the right border of your screen, swipe left.
2. Select Camera Settings.
3. Select Tracking On ☑️ or Tracking Off ☐️.

Audio Adjustments

You can control several audio settings on the system.
Adjust the Volume
You can adjust the volume before or during a call.

Procedure
» Use the volume slider on the device controlling your video system.
Troubleshooting

Topics:

- Poly Device Mode

Refer to the following topics to help you diagnose and fix problems while using your system.

Poly Device Mode
Use these topics to troubleshoot problems you may encounter using Poly Device Mode.

Audio Levels are Too High or Low

Symptom:
In Poly Device Mode, audio from the video system speakers is too loud or it’s difficult to hear call participants.

Problem:
In Poly Device Mode, your conferencing application and laptop control the video system’s audio. You may need to adjust those volume controls.

Workaround:
Follow these steps until you get the audio levels you want:

Procedure
1. Adjust your conferencing application’s volume.
2. Adjust your laptop’s volume.

Conferencing Application Doesn’t Use System Camera or Audio

Symptom:
You can’t use the video system’s camera or audio in Poly Device Mode.

Problem:
Your conferencing application by default may choose the connected monitor speakers instead of, for example, the Studio X50 speakers.

Workaround:

Procedure
» In your conferencing application, select the video system as your speaker, microphone, and camera device.
Can’t Use System’s Camera or Audio

Symptom:
You may notice the following while using Poly Device Mode:
▪ In your laptop’s conferencing application, you can’t select the video system as a camera or audio source.
▪ The video system’s camera and audio seem unavailable.
▪ The video system’s camera doesn’t display live video.

Problem
There could be a few reasons for these types of problems. For instance, your conferencing application by default may choose the connected monitor speakers instead of, for example, the Studio X50 speakers.

Workaround:
Follow these steps until you fix your problem:

Procedure
1. In your conferencing application, select the video system as your speaker, microphone, and camera device.
2. In your laptop settings, select the video system as your speaker, microphone, and camera device.
3. Exit and restart Device Mode.
4. Replug the USB cable.
5. Connect the cable to a different USB port on your laptop.
6. Try using a different USB cable.
7. Restart your laptop.

Improve Audio Quality

Symptom:
Audio quality during calls in Poly Device Mode could be better. For example, people on the call notice interference or dropped words when you’re speaking.

Problem:
You may encounter these problems for the following reasons: additional USB connections, a bad cable, or audio processing settings.

Workaround:
Follow these steps until your audio quality improves:

Procedure
1. Remove USB audio devices (such as a headset) connected to your laptop.
2. Connect your laptop and video system with a different USB cable.
3. If your conferencing application uses echo cancellation, disable that feature.
4. If you’re playing a musical instrument, enable M-Mode in the system web interface.
Contact your administrator to set up this feature.

**Improve Laptop Screen Mirroring**

**Symptom:**
When mirroring your laptop screen with an HDMI connection, the picture on the connected monitor isn’t ideal.

**Problem:**
The resolution on your laptop may need to be adjusted for the monitor connected to the Poly video system.

**Workaround:**
Follow these steps until screen mirroring quality improves:

**Procedure**
1. Adjust your laptop’s resolution settings.
2. Adjust your laptop’s display settings so the screen duplicates on the monitor.
