## What's New

This release includes all the features and important fixes from earlier 7.2.x releases as well as:

- [Subnet information is now available for use in E911 location identification](#)

### ***Subnet Information for use in E911 Location Identification***

The phone's current subnet length has been added to the LLDP sourced switch port and chassis information provided in SIP REGISTER messages. This information is shared in the X-Switch-Info header and is used to improve location identification in E911 calls.
