Today, people work in a variety of spaces—from a desk, at home or in the office, a huddle room or on the go. Not any old camera will do. To experience cloud-based video meetings in a meaningful way, you need vivid color, clear detail and the ability to detect sometimes subtle, nonverbal cues, such as body language and facial expressions. When people can see each other, they feel more emotionally connected and engaged. This results in reduced meeting fatigue and enhanced decision-making abilities.

The feature-rich EagleEye Mini USB camera is optimized for use in personal and small room environments. Some of its key highlights include high definition 1080p video, electronic pan, tilt and 4x zoom for an image that remains at its highest capable resolution even when fully zoomed. EagleEye Mini brings forth true color hue saturation, backlight compensation, and autofocus optimized for smaller environments ensuring accurate, sharp, life-like images. EagleEye Mini supports simulcast streams so far-end participants will enjoy the highest resolution their endpoint can accommodate. For added security, the integrated privacy shutter prevents unintentional use of your camera.

The pairing between the EagleEye Mini camera and a choice of market-leading, Poly headsets and Poly USB or Bluetooth speakerphones takes minutes. It is compatible and can be used with all leading cloud video solutions.

- Simple, fast installation with a single USB cable
- Flexible mounting options
- Simulcast video streams for the best video performance possible
EAGLEEYE MINI

FEATURES
• Integrated privacy shutter
• Mechanically adjustable tilt
• Plug and Play setup
• Uncompressed local video loopback
• Normal, full, crop video screen modes
