Virtual Communications Are a Key Imperative for State and Local Agencies

The pandemic, and the Great Resignation that followed, have both accelerated the need for more digital acceleration among government agencies.

According to the 2021 State CIO Survey by NASCIO, 86% of state and local CIOs believe that teleworking will become a standard, rather than occasional occurrence.

Virtual Communication Technology Ensures That Your Entire Workforce Can Coordinate Effectively, Reduce Risks, and Minimize Costs

Virtual communication technology ensures that your entire workforce can coordinate effectively, reduce risks, and minimize costs.

Key Issues to Address

1. Public Health is Expanding with Telehealth
   - Telehealth programs can be challenging due to widely dispersed populations and transportation limitations.
   - Reaching rural locations with public health interventions can be difficult.
   - Virtual telehealth appointments enable both direct and remote treatments.

2. Emergency Responders Are Gaining Flexibility with Video Technology
   - First responder and disaster management teams can receive interactive training on the latest crisis management approaches.
   - First responders can collaborate both virtually and in real-time.

Corrections and Judicial Are More Agile on the Digital Plane

State and local agencies need to broaden implementation of virtual communication technology to keep home and office workers connected and coordinated.

Key Issues to Address

1. How to Get There
   - Remote work and hybrid work solutions are the new normal for state and local government.
   - The remote work and hybrid work solutions are the new normal for state and local government.

Virtual Service Solutions

Remote work and hybrid work solutions are the new normal for state and local government.
