

IMPROVED TELEHEALTH EXPERIENCES

BENEFITS

- Exceptional camera optics complement dynamic, adjustable built-in lighting so physicians are confident to look their best.
- Give physicians the freedom to chart while conducting telehealth sessions by adding a dedicated second monitor for patient communications.
- A great solution for shared spaces – aka hot desking – physicians and administrators just plug in their laptop with an easy-to-connect USB.
- Enterprise-grade display delivers exceptional brightness and vibrant colors.
- Legendary Poly audio ensures physicians can hear and be heard clearly with integrated stereo speakers and microphone.
- Works with any video app on your PC or Mac.
- Enhance security and privacy control with the integrated privacy shutter.

POLY STUDIO P21 FOR TELEHEALTH

It can be difficult to conduct virtual visits on your PC or Mac, while at the same time doing your charting on the same monitor. As a healthcare provider, adding the Poly Studio P21 to the mix allows you to focus on the patient encounter while completing your clinical documentation on your main monitor, without having to play “find the video window”.

With the Poly Studio P21, one device delivers the complete collaboration experience, including display, camera, microphone and speakers, with a single USB connection to your PC or Mac so it can be used with any video app.

POLY STUDIO P21

Professional personal telehealth display

Healthcare workers looking for improved communications and more accurate charting.
